

Robot Paper Craft Pencil Topper

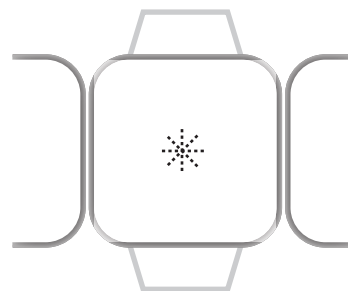

You'll need some glue and an x-acto knife for this one.

Cut around the perimeter taking care not to chop off the tabs.

Also make three cuts around the robot's lights being careful to leave the end uncut so that they are still attached.

Make small cuts in this area, this will be where you can put the pencil or stick or whatever you want to put the robot on.

Fold along all the dashed lines and begin to form the robot. Glue the tabs in place.

Have fun!
